

TIGHTENING AGENT COMPRISING AT LEAST ONE GRAFTED SILICONE  
POLYMER

ABSTRACT OF THE DISCLOSURE

5 A composition useful as a tightening agent for decreasing or removing signs of aging,  
particularly for reducing or removing wrinkles and/or fine lines or to smooth out human skin.  
This composition comprises at least one grafted silicone polymer which itself comprises a  
polysiloxane portion and a portion composed of a non-silicone organic chain, one of the two  
portions constitutes the main chain of the polymer and the other is grafted to said main chain.  
Processes for the cosmetic treatment of aged skin, in particular wrinkled skin, comprising the  
10 application of an effective amount of the composition as defined above to achieve  
improvement in the appearance of rough, damaged or aged skin, or achieve softening the  
wrinkle by a tightening effect.
